

Industrial Diesel Polishing Systems

FOR POWER SENSITIVE FACILITIES

**Computer Data Centers · Telecommunication Facilities · Hospitals
Utilities · Pumping Stations · Prisons · Commercial Buildings**

Cleans Fuel & Tank Interiors

NO HAZARDOUS CHEMICALS

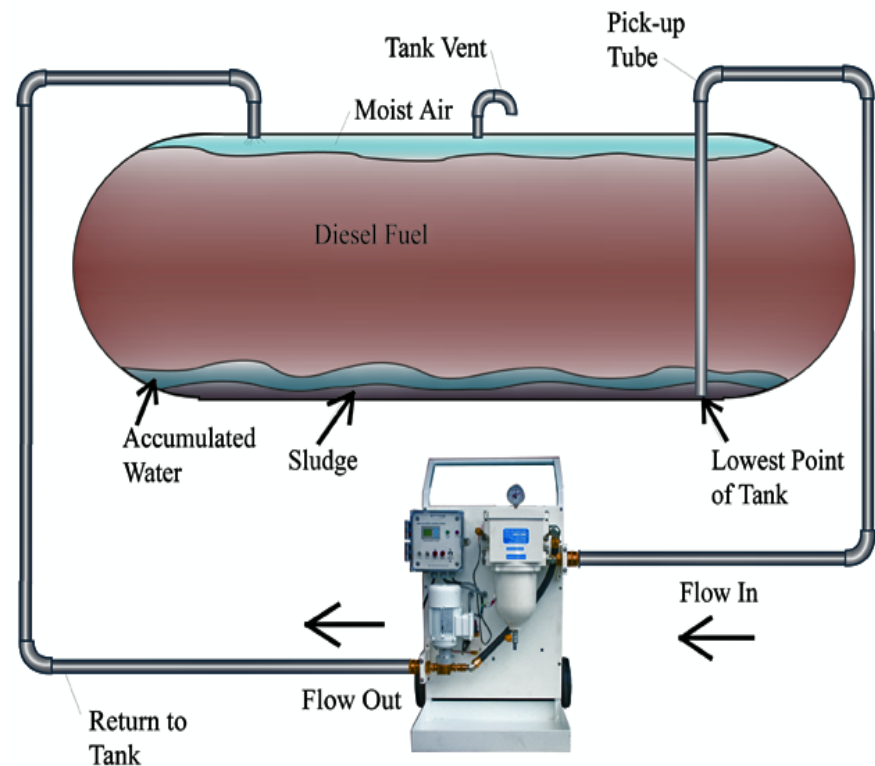

- **SITUATION:** AT&T had 100+ stand-by generators in Texas during **Hurricanes Katrina & Rita**.
- **LESSON LEARNED:** An AT&T official stated: *No matter how well maintained and tested your stand-by generators are, if you don't maintain the diesel fuel in your storage tanks, your generators WILL FAIL.*
- **WHY:** Fuel stored 6 + months will degrade naturally, accumulate water from condensation, gum from aging, and will grow bacteria, yeasts, and fungus in the water. This cycle reproduces rapidly, and if ignored can spoil an entire tank of fuel.

Adding Hazardous Biocides Compounds the Solids Issue

- **SOLUTION:** ASA/DPS-Diesel Polishing System
An Industrial 'OFFLINE' system that removes water, bacterial growth and contaminants from diesel fuel. Fuel is ready to perform when needed.

The Cost Effective Solution
